

Backup restore drill report: api database

Sorrel platform team · Drill DR-2023-02

Drill	DR-2023-02
Date	2023-06-13 (Tuesday)
Scope	Restore the api primary database from the nightly backup into the restore account in eu-west-1
Recovery point	Nightly backup of 2023-06-13 01:00 JST
Drill lead	Ravi
Observer	Mei

Results

Step	Target	Actual	Result
1. Find the latest nightly backup in object storage	10 min	6 min	Pass
2. Copy the backup to the restore account in eu-west-1	45 min	38 min	Pass
3. Restore the database from the backup	90 min	2 h 04 min	Fail
4. Check row counts against the production snapshot	20 min	17 min	Pass
5. Start api against the restored database and make a test booking	30 min	22 min	Pass
Total time to a working api	4 h	3 h 27 min	Pass

Step 3 was slow because the restore used the default instance size. The bookings table came back with 41,880,112 rows, matching the production snapshot exactly.

Follow-up: restore to a larger instance size and repeat the drill in December.
